Nawaz Muztaba

CEH Certified | Penetration Tester | Red Team Enthusiast | Fresher

Pune| Open to Relocation | 6200289203 | nawazmuztaba000@gmail.com | linkedin.com/in/nawaz-muztaba/ | github.com/NawazMuztaba/

PROFESSIONAL SUMMARY

Entry-level Penetration Tester and Red Team enthusiast with hands-on experience in web application pentesting, network pentesting, VAPT, and adversarial reconnaissance. Skilled in identifying and exploiting critical vulnerabilities, post-exploitation analysis, and generating structured remediation reports aligned with MITRE ATT&CK, OWASP Top 10, and CVSS scoring. Proficient with industry-standard red team tools including Burp Suite, Metasploit, Nmap, SQLMap, Gobuster, and Hydra across Linux and Windows environments.

TECHNICAL SKILLS

Penetration Testing: Web Application Pentesting, Network Pentesting, Red Team Operations, Vulnerability Assessment, Exploitation, Privilege Escalation, Post-Exploitation, Adversarial Reconnaissance, Attack Surface Mapping

Security Tools: Burp Suite, Metasploit, Nmap, Kali Linux, Wireshark, OpenVAS, SQLMap, Gobuster, Hydra, Nikto, MobSF

Frameworks & Methodology: MITRE ATT&CK, OWASP Top 10, OWASP Mobile Top 10, PTES, CVSS, NIST CSF

Networking & Systems: TCP/IP, DNS, NAT, VLANs, Subnetting, Firewall Concepts, Active Directory (Basic), Windows, Linux

Programming & Scripting: Python (Security Scripting, Automation), Bash Scripting, PowerShell

PROFESSIONAL EXPERIENCE

Security Intern | VAPT & Penetration Testing | *Vaishnav Technologies Pvt Ltd* — Jan 2025 - Mar 2025

- Conducted web application pentesting on 3 internal applications aligned with OWASP Top 10; identified 12+ vulnerabilities including SQL injection, XSS, and security misconfigurations using Burp Suite and Nikto.
- Performed network pentesting and reconnaissance using Nmap and OpenVAS across 2 internal network segments; identified 8+ exposed services and potential attack vectors, documented in structured remediation reports.
- Executed post-exploitation analysis on identified vulnerabilities to assess real-world impact; performed privilege escalation tests and reported findings with CVSS severity scores for prioritized remediation.
- Supported red team exercises by correlating 15+ IOCs mapped to MITRE ATT&CK techniques; assisted in adversarial simulation and attack surface mapping across target environments.

PROJECTS

Sentinel-X: Automated VAPT & Attack Surface Management Framework | *github.com/NawazMuztaba/Sentinel-X* — Aug - Nov 2025

- Built an automated red team VAPT framework integrating reconnaissance, asset discovery, service enumeration, and TLS analysis; scanned 10+ target environments and detected 25+ misconfigurations risk-scored using CVSS aligned with PTES methodology.
- Simulated adversarial reconnaissance workflows to identify exposed services, firewall gaps, and weak configurations; reduced manual pentest reconnaissance time by ~60% through Python automation and Bash scripting.
- Generated structured pentest reports with executive summaries, technical findings, exploitation evidence, and prioritized remediation recommendations — mirroring real-world red team deliverables.

Intelligent SOC Automation System | *github.com/NawazMuztaba/intelligent-soc-automation* — Dec 2025 - Jan 2026

- Developed a log-based attack simulation engine replicating red team TTPs including brute-force, port scanning, and anomalous authentication; mapped 8+ attack patterns to MITRE ATT&CK techniques for adversarial analysis.
- Implemented event correlation and IOC detection logic processing 1,000+ simulated events; built severity-scored alert prioritization dashboard to visualize attack patterns and support post-exploitation analysis.
- Simulated 3+ real-world red team attack chains end-to-end using Python scripting; tested detection logic against 5 custom attack scenarios validating 95% IOC detection accuracy across all test runs.

Android Application Security Analysis using MobSF | *Android, MobSF, AppSec* | *Demo on LinkedIn* — Aug - Sep 2024

- Conducted static and dynamic security testing of 5 Android applications using MobSF; identified 18+ vulnerabilities including insecure permissions, exposed components, and weak cryptographic implementations.
- Mapped all findings to OWASP Mobile Top 10 across 3 risk categories; documented repeatable 6-step mobile pentesting methodology and produced structured remediation report with prioritized recommendations.
- Performed network traffic inspection using Wireshark during dynamic testing; identified 4+ instances of sensitive data transmitted over unencrypted HTTP, all flagged with CVSS scores and remediation steps.

CERTIFICATIONS

Certified Ethical Hacker (CEH) - EC-Council — Feb 2026

eJPT - Junior Penetration Tester - INE Security (In Progress) — 2026

Digital Forensics Essentials (DFE) - EC-Council — Jan 2025

CompTIA Linux+ - Cybrary — Dec 2024

Cloud Computing - NPTEL, IIT Kharagpur — Jul 2024

TryHackMe / HackTheBox — Active Offensive Security Labs

EDUCATION

Bachelor of Technology - Computer Science & Engineering — 2022 - 2026

Lovely Professional University, Phagwara, Punjab | CGPA: 7.5

Senior Secondary (12th Grade) - Science (PCM) — 2019 - 2021

Trident Public School, Muzaffarpur, Bihar | 84%
