Nawaz Muztaba

CEH Certified | SOC Analyst | Blue Team | Fresher

Pune | Open to Relocation | 6200289203 | nawazmuztaba000@gmail.com | linkedin.com/in/nawaz-muztaba/ | github.com/NawazMuztaba/

PROFESSIONAL SUMMARY

SOC Analyst fresher with hands-on experience in log monitoring, SIEM-based security event analysis, incident triage, incident response, and threat detection. Skilled in identifying Indicators of Compromise (IOCs), performing event correlation, and producing structured security documentation and remediation reports. Proficient with MITRE ATT&CK and NIST CSF frameworks, and experienced with network security fundamentals including firewall concepts, IDS/IPS, Active Directory, and Windows Security Logs.

TECHNICAL SKILLS

SOC & Monitoring: Log Analysis, Security Event Monitoring, SIEM (Splunk, ELK Stack), Incident Response, Incident Triage, IOC Identification, Event Correlation, Alert Handling, Security Documentation

Tools: Wireshark, Nmap, OpenVAS, Kali Linux, Burp Suite (Basic), Metasploit (Basic), MobSF, Splunk , ELK Stack (Basic)

Frameworks: MITRE ATT&CK, NIST CSF, OWASP Top 10, OWASP Mobile Top 10, ISO 27001 (Awareness)

Networking & Security: TCP/IP, DNS, VLANs, Firewall Concepts, IDS/IPS Fundamentals, Network Security, Windows Security Logs, Active Directory (Basic), Linux

Programming: Python (Log Analysis, Automation & Scripting), Redis (Basic), Flask, React

PROFESSIONAL EXPERIENCE

Security Intern | VAPT & SOC Operations | *Vaishnav Technologies Pvt Ltd* — Jan 2025 - Mar 2025

- Monitored 500+ daily security events using SIEM-style log analysis and event correlation; identified 15+ IOCs mapped to MITRE ATT&CK techniques across a 3-month engagement.
- Conducted VAPT on 3 internal web applications aligned with OWASP Top 10; discovered 12+ vulnerabilities including firewall misconfigurations and IDS/IPS rule gaps, all documented in structured remediation reports.
- Assisted in triage and incident response for 20+ security alerts; validated findings, reduced false-positive rate by 30%, and produced documentation for stakeholder communication.

PROJECTS

Intelligent SOC Automation System | *github.com/NawazMuztaba/intelligent-soc-automation* — Dec 2025 - Jan 2026

- Built a SIEM-style threat detection system processing 1,000+ simulated log events; implemented event correlation mapping 8+ attack patterns (brute-force, port scanning, anomalous auth) to MITRE ATT&CK techniques.
- Designed severity-scored alert prioritization reducing analyst triage time by ~40%; built monitoring dashboard visualizing security events and auto-generating structured remediation reports.
- Integrated Redis-based real-time alert queuing handling 200+ concurrent events, ensuring zero alert loss during high-volume attack simulations across 5 test scenarios.

Sentinel-X: Automated VAPT & Attack Surface Management Framework | *github.com/NawazMuztaba/Sentinel-X* — Aug - Nov 2025

- Automated attack surface scanning across 10+ target environments; detected 25+ misconfigurations including exposed services, firewall gaps, and weak TLS configurations, all risk-scored by severity aligned with NIST CSF.
- Reduced manual reconnaissance time by ~60% through integrated service enumeration and TLS analysis; generated structured reports with actionable remediation steps for each identified risk.
- Developed modular Python architecture with 4 independent scanning modules (recon, enumeration, TLS, reporting), enabling plug-and-play extension for new attack surface checks.

Android Application Security Analysis using MobSF | *Android, MobSF, AppSec | Demo on LinkedIn* — Aug - Sep 2024

- Conducted static and dynamic security testing of 5 Android applications using MobSF; identified 18+ vulnerabilities including insecure permissions, exposed components, and weak cryptographic implementations.
- Mapped all findings to OWASP Mobile Top 10 across 3 risk categories; produced structured remediation report with prioritized recommendations adopted for 2 app fixes.
- Documented a repeatable 6-step mobile security testing methodology covering static analysis, dynamic runtime testing, network traffic inspection, and remediation reporting.

CERTIFICATIONS

Certified Ethical Hacker (CEH) - EC-Council — Feb 2026

Digital Forensics Essentials (DFE) - EC-Council — Jan 2025

CompTIA Linux+ - Cybrary — Dec 2024

Cloud Computing - NPTEL, IIT Kharagpur — Jul 2024

TryHackMe / HackTheBox — Active Offensive Security Labs

EDUCATION

Bachelor of Technology - Computer Science & Engineering — 2022 - 2026

Lovely Professional University, Phagwara, Punjab | CGPA: 7.5

Senior Secondary (12th Grade) - Science (PCM)

Trident Public School, Muzaffarpur, Bihar | 84% — 2019 - 2021
